

EK-Quantum Vector Dual EVO RTX 2070/2080

GPU WATER BLOCK

This product is compatible with 2070/80 Dual Evo graphics cards. It is intended for installation only by expert users. Please consult with a qualified technician for installation. Improper installation may result in damage to your equipment. EK Water Blocks assumes no liability whatsoever, expressed or implied, for the use of these products, nor their installation. The following instructions are subject to change without notice. Please visit our web site at www.ekwb.com for updates. Before installation of this product please read important notice, disclosure and warranty conditions printed on the back of the box.

Before you start using this product please follow these basic guidelines:

Please carefully read the manual before beginning with the installation process!

Please remove your graphics card from the computer to assure safest mounting process in order to prevent any possible damages to your GPU and/or graphics card circuit board (PCB).

The EK Fittings require only a small amount of force to screw them firmly in place since the liquid seal is ensured by the rubber O-ring gaskets.

The use of corrosion inhibiting coolants is always recommended for liquid cooling systems, and mandatory for nickel plated water blocks!

Do not use pure distilled water! For best results EK recommends the use of EK-CryoFuel coolants!

Make sure to thoroughly bleed air out of your water block, or you will not reach optimal performance!

PREPARING YOUR GRAPHIC CARD

STEP 1

REMOVING THE FACTORY PROVIDED BACKPLATE

Remove all marked screws using Phillips head screwdriver. All heat sink assembly screws should be removed, including self-adhesive washers on both sides of the PCB (if present).

STEP 2

REMOVING THE STOCK COOLER

Remove all marked screws using Phillips screwdriver. All heat sink assembly screws should be removed, including self-adhesive washers on both sides of the PCB(if present). After you remove the housing do not forget to unplug the fans.

STEP 3 **CLEANING THE PCB**

Carefully detach the original stock cooler after removing all screws securing it to the board. Wipe off the remains (by using non-abrasive cloth or q-tip, as shown on sample image) of the original thermal compound until the components and circuit board are completely clean. EKWB recommends the use of denatured alcohol for removing TIM leftovers.

STEP 4 **APPLYING THERMAL COMPOUND**

Wipe off the remains (by using non-abrasive cloth or q-tip) of the original thermal compound until the components and circuit board are completely clean. Apply thermal compound: lightly coat chip with enclosed EK-TIM Ectotherm thermal grease. EK recommends blob or line method of applying the enclosed thermal compound for best performance (see sample picture).

STEP 5

CUTTING THERMAL PADS

Your block comes with thermal pads, some of which are already pre-cut. Others have to be cut to smaller chunks in order to cover all the VRM components such as COILs, MOSFETs and drivers.

PLEASE REMOVE THE PROTECTIVE FOIL FROM BOTH SIDES OF THE THERMAL PADS PRIOR TO INSTALLATION.

Replacement thermal pads:

Thermal PAD E 0,5 mm - (RAM 8X) - (3830046996688)

Thermal PAD F 0,5 mm - (120 x 16 mm) - (3830046996725)

Thermal PAD F 1,0 mm - (120 x 16 mm) - (3830046996732)

STEP 6

PLACING THERMAL PADS

Place thermal pads on the circuit board as shown on the picture below. Refer to numbering in previous picture when applying thermal pads of different sizes or thicknesses. EK made sure to provide customers with more than adequate quantity of thermal pads to complete this step.

INSTALLING THE WATER BLOCK

STEP 1

PLACING THE BLOCK TO THE GRAPHICS CARD

Carefully position the water block with preinstalled standoffs on to the graphics card. During this process please make sure you align mounting holes on the PCB with holes on the water block (same applies for other tops). Also pay attention not to use too much force by pressing the block down to the PCB. Chip dies are prone to cracking. Procedure is the same for all Full Cover water blocks.

STEP 2

ATTACHING THE BLOCK TO THE GRAPHICS CARD

Use a Phillips screwdriver screw with the enclosed M2,5 x 4 AX1 screws. EKWB recommends users to start tightening the screws around the GPU core and continue outwards. Always use a plastic washer under each and every screw! If the washer is already present on the circuit board (usually around the four GPU core screw holes) there is no need for additional washer.

In this step you will need:

Phillips-head
screwdriver

M 2.5 x 4 AX1
13 pcs

M 2.5 PVC washer
13 pcs

CHECKING FOR CONTACTS

If necessary temporarily remove the water block to check for uniform surface contact between the block and the components, pay special attention to the VRM section of the graphics card. Check whether the water block makes contact with the intended integrated circuit. Then repeat sub-steps in previous section to re-attach the block.

In case you fail to obtain good contact, please check again that your thermal pad thickness or contact our support service at <http://www.ekwb.com/support>.

INSTALLATION OF FITTINGS AND TUBING

Screw in the two G1/4 threaded male fittings. Attach the liquid cooling tubes and connect the water-block(s) into the cooling circuit. **EKWB recommends using EK Fittings with the EK-Quantum Vector series water blocks.** To ensure that the tubes are securely attached to the barb/fittings, please use hose clamps or an appropriate substitute.

You can use any opening as an inlet/outlet port. Do not forget to plug the remaining two opening with enclosed EK-Plug G1/4 or equivalent.

CAUTION: In case of using connectors other than EK Fittings, take special attention to the length of the fittings' male G1/4" thread. 5 mm is the maximum allowed G1/4" thread length!

INSERTING THE CARD IN YOUR PC CASE

Carefully lift your graphics card with installed block and insert it in your PC's motherboard PCI-express expansion slot. Please bear in mind that your graphics card is probably heavier than when it was equipped with original heat sink fan assembly. One needs to be very careful when handling the graphic card. Avoid all un-needed manipulation of the VGA/water block assembly that might damage your card or water block during final installation.

REQUIRED TOOLS

Phillips-head screwdriver

Scissors

CONNECTING THE D-RGB LED STRIP (optional)

STEP 1

Plug the 3-pin connector from Water block's D-RGB LED light to the DRGB HEADER on the motherboard. The LED will work if the pin layout on the header is as follows: +5V, Digital.

Please ensure that the arrow indicated on the connector is plugged into the +5V line as indicated on your motherboard. If you put LED Diode to the 12V RGB HEADER you can damage the LEDs.
