

This product is intended for installation only by expert users. Please consult with a qualified technician for installation. Improper installation may result in damage to your equipment. EK Water Blocks assumes no liability whatsoever, expressed or implied, for the use of these products, nor their installation. The following instructions are subject to change without notice. Please visit our web site at [www.ekwaterblocks.com](http://www.ekwaterblocks.com) for updates. Before installation of this product please read important notice, disclosure and warranty conditions printed on the back of the box.

**The barb hose fittings require only a small amount of force to screw them in; otherwise the high flow fittings might break. These fittings do not need to be tightened with much force because the liquid seal is made using o-rings.**

## STEP 1: GENERAL INFORMATION. Sample picture of 4890 vapor X graphic card.

## STEP 2: PREPARING YOUR GRAPHIC CARD.

**1.REMOVING STOCK COOLER.** Remove all encircled screws. All heat sink assembly screws should be removed. There are 12 screws on the back of the graphic card.

**2.CLEANING THE PCB.** Carefully detach the original heat sink after removing all fasteners securing it to the board and bracket. Wipe off the remains (by using non-abrasive cloth or qtip, as shown on sample photo) of the original thermal compound until the components and circuit board are completely clean. EKWB does not recommend using any liquids for removing paste.

### 3.APPLYING THERMAL COMPOUND

Apply thermal compound: lightly coat the GPU with for example Céramique™ thermal compound. Follow this link [http://www.arctic-cooling.com/catalog/product\\_info.php?cPath=39\\_&mID=127&language=en](http://www.arctic-cooling.com/catalog/product_info.php?cPath=39_&mID=127&language=en) for detailed instructions. EKWB recommends non-conductive MX-2, which should be applied in cross form for best performance (see sample picture).

**4.CUTTING THERMAL PADS.** Your block comes with thermal pads, which have to be placed on chips (PLEASE REMOVE FOIL ON BOTH SIDES OF THERMAL PADS PRIOR TO INSTALLATION. WARNING: DIMENSION BELOW ARE SCALED)

**5.PLACING THERMAL PADS ON PCB.** Place thermal pads on chips so that numbers on chips match size of thermal pads. Thermal pad number 2 will have to be cut by user to match all small mosfet chips (EKWB made sure users have more than enough pads to cover all surfaces that need to be covered to make block fully function). You can also use small drop of thermal grease on chips to make thermal pads more adhesive.

**6.PLACING STANDOFFS ON BLOCK.** Standoffs are obligatory to make this block fully functional. Please use small amount of thermal grease on standoffs and glue them so they are concentric with mounting holes. Once they are stuck to block be careful not to move them.

7. PLACING BLOCK TO GRAPHIC CARD. During this process please make sure you align holes on PCB with holes on block. Also pay attention not to use too much force by pressing block down to PCB. Chips are prone to cracking.

8. ATTACHING BLOCK TO GRAPHIC CARD. By using Philips screwdriver screw in enclosed M3x8 screws. EKWB recommends starting around the GPU core and continue outwards.

**STEP 3: CHECKING FOR CONTACTS**

Temporarily remove the water blocks to check for uniform surface contact between the block and the components. Note the pattern of contact on a piece of paper. Then repeat steps 5 and 8 to reattach the block applying more or less pressure to the areas where you have found it necessary.

**STEP 4: POSITIONING FITTINGS AND CONNECTING TO WATER CIRCUIT**

Please use spacer on copper base (see picture). Screw in the fittings and plugs, attach the liquid cooling tubes and connect the water-block(s) into the cooling circuit. EKWB recommends using high flow fittings with the EK-FC 4890 VAPOR X series water blocks. To ensure that the tubes are securely attached to the barb/fittings, please use hose clamps or an appropriate substitute. The use of an algaecide is always recommended for any liquid cooling system. You can use any hole as an inlet/outlet hole.

**REQUIRED TOOLS AND MOUNTING SCREWS:**

scissors

philips scredriver

12 screws M3x8 DIN7985
