

EK-Quantum Vector Trinity RTX 3080/3090 Active Backplate

This product is intended for installation by expert users only. Please consult with a qualified technician. Improper installation may result in damage to your equipment. EK assumes no liability whatsoever, expressed or implied, for the use of this product or its installation. The following instructions are subject to change without notice. Please, read the manual carefully before beginning with the installation process. For updates, you can visit our official website www.ekwb.com.

Before you start using this product, please follow these basic guidelines:

Carefully read the manual before beginning with the installation process.

Remove your graphics card from the computer for the safest mounting process to prevent any possible damage to your GPU or its circuit board (PCB).

EK Fittings require only a small amount of force to screw them firmly in place since the liquid seal is ensured with the rubber O-ring gaskets.

The use of quality market-proven corrosion-inhibiting coolants is always strongly recommended for any liquid cooling system.

Do not use pure distilled water as a cooling liquid!

For best results, EK recommends the use of EK-CryoFuel Coolants.

Make sure to bleed air out of your water block thoroughly in order to reach optimal performance.

EK only guarantees compatibility with included EK-brand thermal pads. Installation process, cooling performance and block contacts are tested exclusively with EK-brand thermal pads. Listed thermal pad thicknesses apply only to thermal pads included in the package.

EK does not guarantee compatibility with aftermarket alternatives for thermal interface material.

BOX CONTENTS

EK-Quantum Vector Trinity RTX 3080/3090 Active Backplate D-RGB

Universal Mounting Mechanism – You may not need every screw from this package.

M2.5x8 AX1 Screw (8 pcs)

Thermal Pad G 1.0 mm (3 pcs)

Thermal Pad G 1.5 mm (1 pc)

Thermal Pad G 2.0 mm (3 pcs)

Allen Key 2.5 mm (1 pc)

ACTIVE BACKPLATE DIMENSIONS

REQUIRED TOOLS

ACTIVE BACKPLATE SPECIFICATIONS AND MAIN PARTS

Technical Specifications:

Dimensions (L x H x W): 233 x 124 x 33.4 mm

D-RGB (Addressable RGB) Cable Length: 500 mm

D-RGB LED Count: 9

D-RGB Connector: Standard 3-Pin (+5V, Data, Blocked, Ground)

INSTALLING THE ACTIVE BACKPLATE

STEP 1

PREPARING THE GRAPHICS CARD

First, complete the installation of your EK-Quantum Vector Trinity RTX 3080/3090 water block according to its installation manual.

In case the water block is already installed, remove the six (6) AX1 screws and their PVC washers, as shown in the image.

EK-Quantum Vector Trinity RTX 3080/3090 Active Backplate comes with its own terminal, meaning the original terminal, along with two (2) 15x1 O-rings, on the EK-Quantum Vector Trinity RTX 3080/3090 water block has to be removed.

Unscrew the three (3) M4 x 27 DIN7984 screws and detach the terminal from the water block.

The procedure of terminal detachment is shown in the image.

Attention!

In case the EK-Quantum Vector Trinity RTX 3080/3090 water block is already filled with coolant, empty the content of the water block before continuing with this step. Be careful that the coolant that remained in the water block does not come in contact with the GPU!

Thermal PAD G 1.0 mm (120 x 24 mm)

Thermal PAD G 1.5 mm (120 x 24 mm)

Thermal PAD G 2.0 mm (120 x 24 mm)

STEP 2

STEP 2

CUTTING AND PLACING THERMAL PADS

Your backplate comes with thermal pads that have to be cut into smaller pieces to cover all the VRM components. EK made sure to provide you with more than an adequate quantity of thermal pads to complete this Step.

You must remove the protective foil from both sides of the thermal pad before installation.

Replacement thermal pads:

3x Thermal PAD G 1.0 mm - (120 x 24 mm) - EAN: 33830046996770

1x Thermal PAD G 1.5 mm - (120 x 24 mm) - EAN: 3830046996787

3x Thermal PAD G 2.0 mm - (120 x 24 mm) - EAN: 3830046996794

EK only guarantees compatibility with included EK-brand thermal pads. Installation process, cooling performance and block contacts are tested exclusively with EK-brand thermal pads. Listed thermal pad thicknesses apply only to thermal pads included in the package.

EK does not guarantee compatibility with aftermarket alternatives for thermal interface material.

3080 Version

Thermal Pad G 1.5 mm
Thermal Pad G 2.0 mm

3090 Version

Thermal Pad G 1.0 mm
Thermal Pad G 1.5 mm
Thermal Pad G 2.0 mm

STEP 3

STEP 3

Once cut to size, thermal pads should be placed on the backplate, as illustrated below.

STEP 4 REMOVING THE TERMINAL METAL PLATE

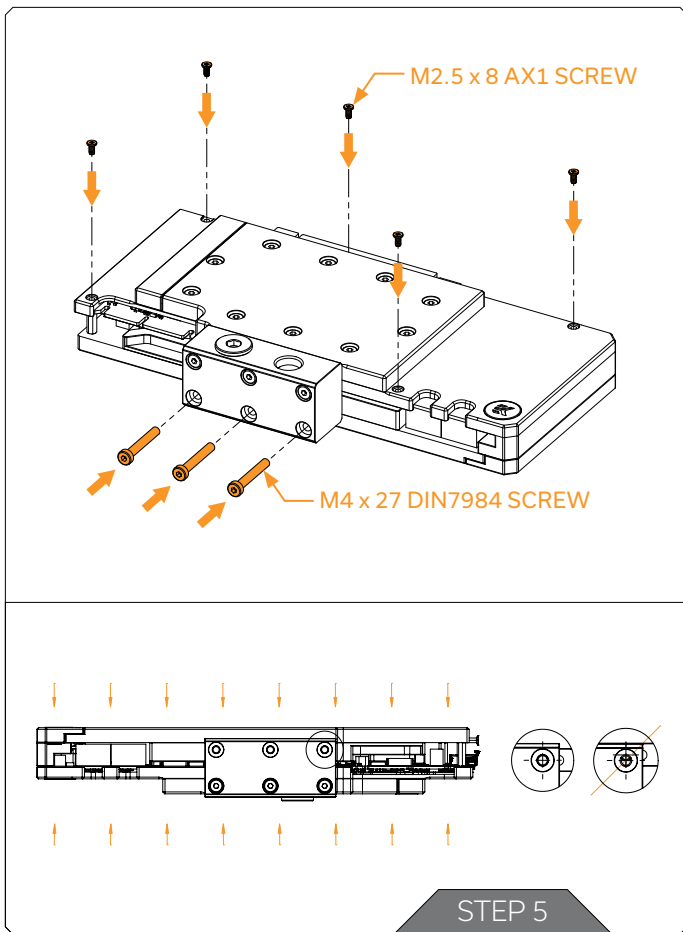

The Metal plate attached on the Terminal is meant as a precaution, to secure the two O-rings to prevent them from falling out of their sockets during transport and handling. Before the installation of the Active Backplate, this metal plate has to be removed. Unscrew the three (3) M4 x 27 DIN7984 screws with the provided 2.5 mm Allen Key shown on the picture. Keep the screws as they will be needed in the upcoming step, unlike the metal plate which will not be needed anymore.

STEP 5 ATTACHING THE ACTIVE BACKPLATE

First, make sure the two (2) 15 x 1 O-rings are IN terminal slots, as shown in the image.

Place the active backplate on the PCB and make sure all holes are aligned. Position an M2.5 x 8 AX1 screw into each of the five (5) mounting holes (as shown in the image) and tighten them evenly with a Phillips head screwdriver.

To avoid using excessive force, you can easily loosen up the three (3) M4 x 27 7984DIN screws pre-installed on the terminal, but be careful that two (2) 15 x 1 O-rings remain in their terminal slots. Also, do not forget to tighten the three (3) loosed M4 x 27 7984DIN screws back after attaching the Active Backplate.

In order to ensure that the holes in the terminal and the block line up, the thermal pads near the terminal must be compressed. This can be achieved by squeezing the block and active backplate together.

This will not damage the PCB as the mounted standoffs prevent contact at critical locations. This is the only way to guarantee the promised performance of the components.

Then, position the three (3) M4 x 27 7984DIN screws that were detached from the GPU water block terminal into each of the three (3) mounting holes (as shown in the image) and tighten them evenly with the provided 2.5 mm Allen Key.

Do not use excessive force!

 CAUTION: When placing the Active Backplate on the PCB, the two inserted 15 x 1 O-rings must remain inside their terminal slots. Wrongly positioned O-rings can cause leaks!

For this Step, you will need:

INSTALLING FITTINGS AND TUBING

STEP 1

Screw-in two (2) G1/4 threaded male fittings. Attach liquid cooling tubes and connect the water block to the cooling loop.

Do not forget to plug the remaining opening with enclosed EK-Plug G1/4 or its equivalent.

You can use any opening as an inlet/outlet port. The pre-mounted terminal is positioned for the optimal flow in the EK-Quantum Vector Trinity RTX 3080/3090 water block and in the EK-Quantum Vector Trinity RTX 3080/3090 Active Backplate. The terminal can be shifted for 180 degrees but by using it so, the inlet and outlet ports are changed.

EK recommends using EK fittings with all EK water blocks.

CAUTION: When using connectors other than EK fittings, pay special attention to the length of the fittings' male G1/4" thread - 5mm is the maximum G1/4" thread length allowed!

CONNECTING THE D-RGB LED STRIP

STEP 1

Plug the **4-pin D-RGB** connector from the GPU water block to the **D-RGB Header** on your motherboard or controller. The LED strip will work only if the pin layout on the header is as follows: **+5V, Data, Empty, Ground**.

Incorrect installation or installation to a wrong header can damage the LED strip or the header itself!

TESTING THE LOOP

To ensure the installation of EK components was successful, we recommend you perform a 24-hour leak test.

When your loop is complete and filled with coolant, connect the pump to a PSU outside your system. Do not connect power to any of the other components. Turn on the PSU and let the pump run continuously.

Inspect all parts of the loop, and in case the coolant leaks, fix the issue and repeat the testing process. To prevent possible damage, please ensure that all hardware is dry before the system is powered on.
