

This product is intended for installation only by expert users. Please consult with a qualified technician for installation. Improper installation may result in damage to your equipment. EK Water Blocks assumes no liability whatsoever, expressed or implied, for the use of these products, nor their installation. The following instructions are subject to change without notice. Please visit our web site at www.ekwb.com for updates. Before installation of this product please read important notice, disclosure and warranty conditions printed on the back of the box.

Before you start using this product please follow these basic guidelines:

1. Please carefully read the manual before through before beginning with the installation process!
2. Please remove your motherboard from the computer to assure safest mounting process in order to prevent any possible damages to your CPU and/or motherboard's circuit board (PCB).
3. The EK High Flow and EK-PSC type fittings require only a small amount of force to screw them firmly in place since the liquid seal is ensured by the rubber o-ring gaskets.
4. The use of corrosion inhibiting coolants is always recommended for any liquid cooling system.

STEP 1: GENERAL INFORMATION. Sample picture of AMD FirePro S10000 graphics card.

STEP 2: PREPARING YOUR GRAPHIC CARD.

1. REMOVING STOCK COOLER: Remove encircled screw on the bracket (required only on certain models):

STEP 2 cont.: PREPARING YOUR GRAPHIC CARD

1 cont.. REMOVING STOCK COOLER. Remove all encircled screws. All heat sink assembly screws should be removed, including self-adhesive washers on both sides of the PCB (if present). There are up to 16 screws on the back of the graphics card.

2. CLEANING THE PCB. Carefully detach the original stock cooler after removing **all** screws securing it to the board. Wipe off the remains (by using non-abrasive cloth or *qtip*, as shown on sample photo) of the original thermal compound until the components and circuit board are completely clean. EKWB recommends the use of denatured alcohol for removing TIM leftovers.

3. APPLYING THERMAL COMPOUND. Wipe off the remains (by using non-abrasive cloth or *qtip*) of the original thermal compound until the components and circuit board are completely clean. Apply thermal compound: lightly coat both **AMD GPU chips** as well as **PLX bridge chip** with enclosed Arctic Cooling MX-2™ thermal grease. EKWB recommends to apply thermal grease in cross form for best performance (see sample picture).

4. CUTTING THERMAL PADS. Your block comes with thermal pads, some of which are already pre-cut. Others have to be cut to smaller chunks in order to cover all the VRM components such as MOSFETs and drivers. PLEASE REMOVE THE PROTECTIVE FOIL FROM BOTH SIDES OF THE THERMAL PADS PRIOR TO INSTALLATION.
Replacement thermal pads: Thermal Pad D – 0.5mm (RAM 8X), Thermal Pad A – 0.5mm (100x16mm)

STEP 3: INSTALLING THE WATER BLOCK

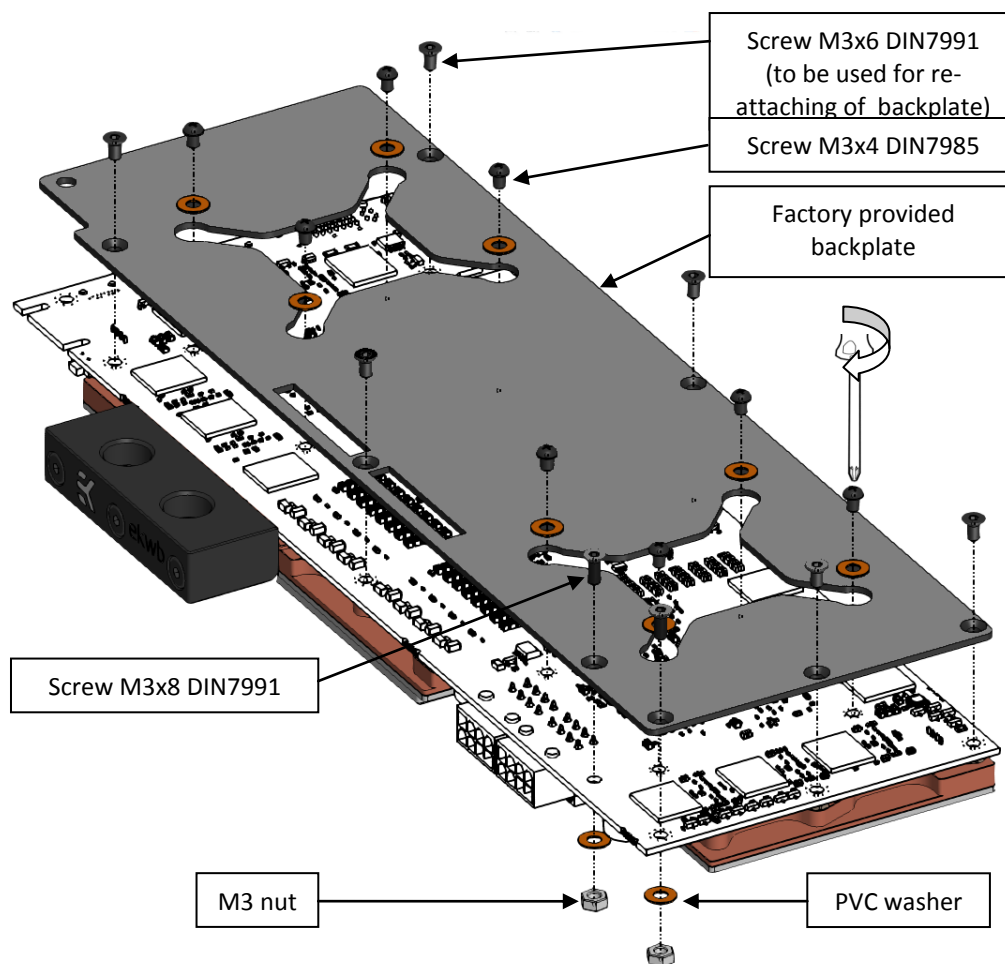

1. PLACING THERMAL PADS ON PCB. Place thermal pads on chips so that numbers on chips match size of thermal pads. EKWB made sure users have more than enough pads to cover all surfaces that need to be covered to make block fully functional). EKWB recommends using small drops of electrically non-conductive (for example: Arctic Cooling MX-2™, MX-4™ or GELID GC-Extreme™) thermal grease on each phase regulator (that is being covered with thermal pad) in order to even further improve the thermal performance of the EK-FCS10000 series water block.

2. **PLACING BLOCK TO GRAPHIC CARD.** Carefully position the water block with preinstalled 2.5mm standoffs on to the graphics card. During this process please make sure you align mounting holes on PCB with holes on the water block. Also pay attention not to use too much force by pressing block down to PCB. Chip dies are prone to cracking.

3. **ATTACHING BLOCK TO GRAPHIC CARD.** By using Philips screwdriver and Allen key screw in enclosed M3x4 DIN7985 as well as M3x6- and M3x8 DIN7991 screws. EK recommends users to start with 8 (eight) M3x4 screws around each GPU. Use plastic washers underneath each M3x4 DIN7985 screw. Then continue to re-install the factory provided backplate using 6 (six) M3x6 DIN7991 screws. Finish installation by securing the backplate to the PCB using two M3x8 DIN7991 screws, washers and nuts! Install all DIN7991 type (countersunk) screws using enclosed Allen key 2mm.

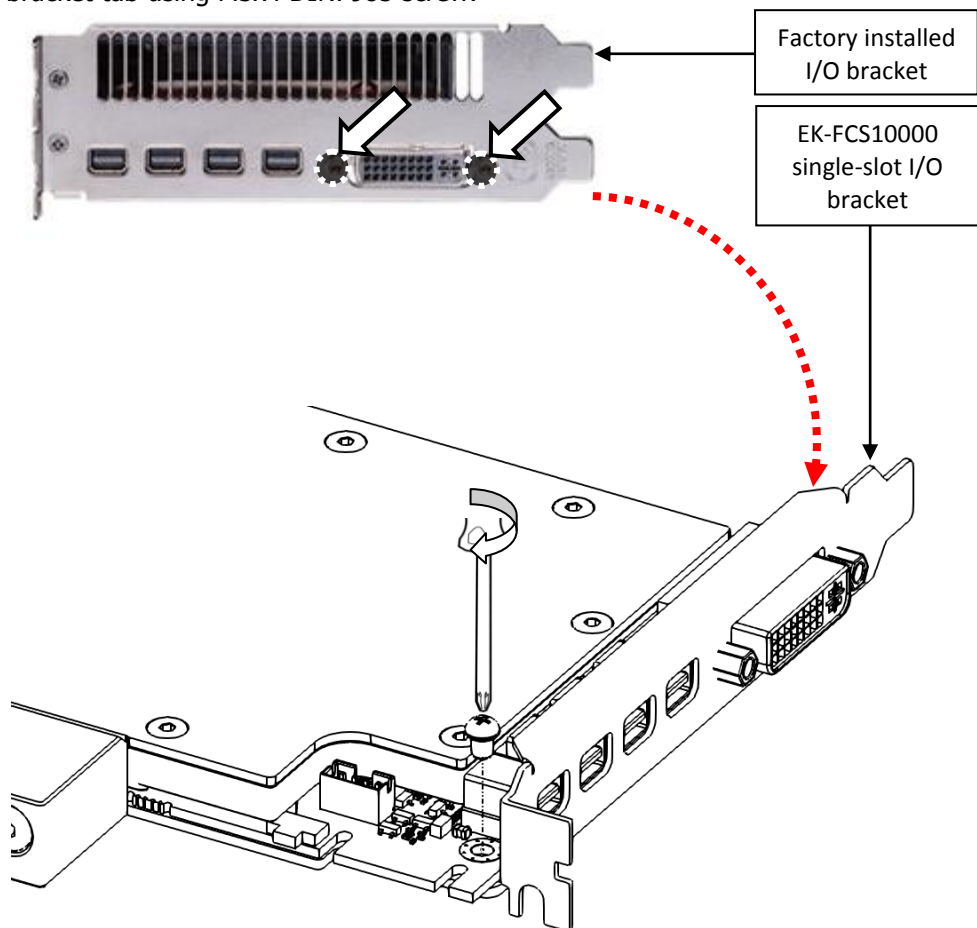

STEP 4: CHECKING FOR CONTACTS

If necessary temporarily remove the water block to check for uniform surface contact between the block and the components, pay special attention to the VRM section of the graphics card. Check whether the water block makes contact with the intended integrated circuit. Then repeat sub-steps in previous section to re-attach the block. **In case you fail to obtain good contact, please check again your thermal pad thickness or contact our support service at <http://www.ekwb.com/support>.**

STEP 5a: REPLACING THE ORIGINAL I/O BRACKET

Remove two hexagonal nuts securing the original two-slot I/O bracket to the circuit board. Remove the screw that secures the tab of the I/O bracket to the circuit board as well. Replace the original I/O bracket with enclosed EK-FCS10000 single-slot I/O bracket and install it using two original hexagonal nuts. Secure the bracket tab using M3x4 DIN7985 screw.

STEP 6: INSTALLATION OF FITTINGS AND TUBING

Screw in the two G1/4 threaded male fittings. Attach the liquid cooling tubes and connect the water-block(s) into the cooling circuit. **EKWB recommends using EK-PSC fittings with the EK-FCS10000 series water blocks.** To ensure that the tubes are securely attached to the barb/fittings, please use hose clamps or an appropriate substitute.

You can use any opening as an inlet/outlet port.

CAUTION: In case of using connectors other than EK-PSC series compression fittings take special attention to the length of the fittings' male G1/4" thread. In case the thread is longer than 5mm please use the enclosed 1.8mm nickel plated distancer! 5mm is the maximum allowed G1/4" thread length!

STEP 6: FINISHING INSTALLATION - INSERTING THE GRAPHICS CARD IN YOUR PC CHASSIS

Carefully lift your card with installed water block and insert it into the appropriate motherboard slot in your computer chassis. Please bear in mind that your card suddenly withstands extra weight thus again be very careful not to bend it or cause any other unneeded moves that might damage your card or block during installation.

REQUIRED TOOLS:

scissors

philips head screwdriver
